PROJECT DESIGN PHASE — ARTIFACT 08

Problem-Solution Fit Mapping

Aligning Guest & Operational Pain Points with System Features

1. PROBLEM VS. PROPOSED SOLUTION MATRIX

Identified Friction / Problem	Proposed Technical Solution	Quantifiable Impact Target
22-Minute Check-In Delays Long queues at lobby desk during peak arrival hours.	**Mobile Pre-Registration & Digital BLE Key** Bypasses front desk entirely for registered guests.	**80% Reduction** in wait times (under 3 mins).
Fragmented Guest Profiles Special preferences lost between departments.	**Centralized Cloud Guest CRM** Unified profile synced to Spa, Dining & Housekeeping.	**95% Accuracy** in preference delivery.
Noisy Radio Coordination Staff calling room numbers over radio near guest areas.	**Automated IoT Housekeeping Mobile App** Silent push dispatch based on sensor occupancy.	**100% Elimination** of public radio chatter.
Billing Discrepancies Unbilled restaurant or spa charges at checkout.	**Real-Time API POS Integration** Instant folio posting across all resort outlets.	**Zero Billing Errors** at check-out.

2. VALUE PROPOSITION ALIGNMENT GRAPHIC
